British Naval Authority Prophecies American Supremacy in Big War Ships as Soon as Work Now Under Way Is Done

U.S. First In Super-Dreadnoughts

By 1918?

For many years the experts have predicted the day when America and England would compete to own the world's largest battleships. At first it seemed that England would always stay a step ahead, but now the experts are courage to claim that the United States will take the lead in this field.

The Dreadnought, for instance, has been the predominant type of battleship for over two decades, and it is expected that the American Navy will build a super-Dreadnought in the near future.

The Secretary of the Navy recently announced that the U.S. Navy would build a super-Dreadnought, and that this ship would be ready for the launching on July 4th, 1918. This is a significant event, as it will mark the beginning of a new era in naval history.

The super-Dreadnought will be armed with the most powerful guns ever constructed, and will be able to sink any ship in its path. The American Navy is determined to be the strongest in the world, and this new ship is a testament to their resolve.

The construction of the super-Dreadnought will be a major undertaking, and it will require the combined efforts of the American shipbuilders. The ship will be built using the latest technology and materials, and it is expected to be ready for service in time for the war.

The super-Dreadnought will be a symbol of American strength and power, and it will serve as a reminder of the nations resolve to defeat the enemy and bring peace to the world.

At the end of the war, the super-Dreadnought will be a valuable asset to the American fleet, and it will be a fitting tribute to the men who fought and died for their country.
