Every Conceivable Electric Appliance Installed on U. S. Battleship Maryland

Has Perfect Record in Builders' Trial Off Virginia Capes

When the superstructure of the U. S. battleship Maryland was laid down at the Washington Navy Yard last week, all the domestic conveniences that ships are equipped with were installed in her. The oldest traps, elevators, electric lights and every other convenience that ships use were secured and ready to be used in the battleship.

Electric Equipment Planned

Carefully concealed in the many cabins and rooms of the battleship were the most powerful electric elevators ever installed on a battleship. As the ship is to be a floating city and carry a force of 5,000 men, it is necessary to be able to move them about from place to place rapidly and without fatigue. The elevators are therefore an important feature in the construction of the ship.

The elevators are of the latest design and will be able to carry furniture, beds and other materials from one part of the ship to another with ease. They are also equipped with a safety device that will prevent them from starting unless the operator has entered the car. This is an important feature, as it prevents accidents from occurring.

The electric lights are also a feature of the ship, as they are designed to be more efficient than any other type of lighting used on a battleship. The lights are also more durable and will last longer than any other type of light.

The construction of the battleship is the most modern ever attempted and is designed to make her a floating city. The ship will be able to carry a force of 5,000 men and will be equipped with all the conveniences that are necessary for their comfort.

Laughter Has Saved Day in Many Critical and Dark Moments

Measures Light Output From Tiny One Candle Lamp as Well as From 500,000,000 Candle Searchlight

Laughter has saved many a critical and dark moment, according to Dr. H. A. Hoppin, state club president.

"The world today is in great need of laughter," he said, "and we need to use every means at our disposal to bring it into our lives."

Dr. Hoppin pointed out that laughter is a powerful tool in the hands of those who know how to use it. It can bring comfort and solace to those who are suffering, and it can help to make difficult situations easier to bear.

He emphasized the importance of laughter in the lives of children, as it is their natural response to the world around them. "Laughter is not only a form of expression," he said, "but it is also a form of healing."

Dr. Hoppin also spoke of the importance of laughter in the lives of adults, as it can help to relieve stress and bring joy to those who are struggling.

"Laughter is the greatest of all healing agents," he said, "and we should use it whenever we can."
