Another Safety Device

Because of the performance of the reported fire at the textile mill in recent days, haunted by the knowledge that a large number of people have been injured or killed, many people have been forced to work in the factories for hours. Consequently, there has been a spate of workmen's compensation cases, and the government has been forced to take steps to stop the accidents. This is the only reason, and the only reason to be met with, for the high accident rate that has been reached in the factories.

The New Chemical Warfare

A very important article by Julian Sontag is to be found in the current issue of "The Yankee Review." It describes the chemical warfare and the results of the chemical warfare. The article is an important contribution to the understanding of the nature of chemical warfare and its effects on the human race.

The Machinery of War

A bill gun shop of the Bethlehem Steel Company's plant at Bethlehem, Penn. Some of the great guns that have been manufactured in the United States battle trains, as well as in the shops of the American Association, have been recently completed and tested. It is the intention to start them as soon as possible.

The Doctor Shakes His Head

The wave of "Cultural Limitations" and Sensity of Protosplanchnology, She Must Fall

The World's Largest Electric Ship

J. C. Mott, who has been working on the design of a new type of electric ship, has now completed a prototype. It is expected that this new type of ship will be able to travel at a speed of 30 miles per hour, and that it will require a power of 750 horsepower.

The Machinists of Science

The great workshop of science is a place where the machinists of science are working. It is a place where the machines are working, and the tools are being made. The machines are working on the tools, and the tools are working on the machines.

In Case of Air Raids

The solution to the problem of how death is caused by electricity has long been the subject of controversy between German and American scientists. At the University of Berlin it is taught that the electric current passes through the body and turns the heart into a battery, but the body is not affected by the current. The American scientists, on the other hand, teach that electricity stops the rhythmical beating of the heart, and that it is a factor of duration or direction of the waves, and not in any way a cause of the circulatory death.

Electrocutation

The question as to how death is caused by electricity has long been the subject of controversy between German and American scientists. At the University of Berlin it is taught that the electric current passes through the body and turns the heart into a battery, but the body is not affected by the current. The American scientists, on the other hand, teach that electricity stops the rhythmical beating of the heart, and that it is a factor of duration or direction of the waves, and not in any way a cause of the circulatory death.

A Signal Light for the Telephone Receiver

O'Sullivan, when he was a young man, was more interested in photography than anything else. He is now working on a new type of telephone receiver, which is to be used for sending and receiving messages by means of light signals. The receiver is a simple affair, consisting of a lamp and a lens, and it can be used to send and receive messages over a distance of several miles.
