Recent Boiler Accidents On American Warships

December 15, 1864—Explosion of the Maryland at Boston. Minutes after the Maryland was launched at Boston, there was an explosion which killed a number of men. The Maryland was a large battleship built for the Union Navy during the American Civil War. It was one of the most powerful warships of the period and played a significant role in the Union victory. The explosion occurred in the dockyard where the ship was being constructed, and as a result, some workers were killed. The cause of the explosion is not clear, but it is believed to have been due to damage sustained during the ship's construction.
